

CONSTANTIN BALAN

Enschede, Netherlands | costelb033@gmail.com | github.com/tweekmd | linkedin.com/in/constantinbalan

EDUCATION

University of Twente

Enschede, Netherlands

BSc Technical Computer Science (taught in English)

Sep 2025 to Aug 2028 (expected)

- **GPA: 8.34 / 10**
- Relevant coursework: Object Oriented Programming, Databases, Web Programming, Network Systems, Operating Systems, Computer Architecture, Security and Cryptography, Probability Theory, Linear Algebra, Discrete Mathematics

Liceul Teoretic "Mircea Eliade"

Chişinău, Moldova

High School Diploma

Sep 2022 to Jul 2025

- **Final grade: 9.00 / 10**

PROFESSIONAL EXPERIENCE

Hive Setting

Remote

Cofounder, Technical Lead

Mar 2026 to Present

Three person startup that uses AI to answer inbound social media messages and book sales calls; I own all AI automation, while my cofounders run content and sales

- Generated **4,300 booked sales calls from 30,900+ automated conversations** across all client accounts: **74%** of leads replied and **99.7%** of chats ran with no human takeover
- Built stage by stage funnel analytics that found the biggest revenue leak (**26% of qualified leads** never booked after getting the link), then designed and launched live A/B tests on the opener and script to fix the top drop off points
- Engineered the production system in Node.js on Linux: real time DM processing, an automated comment funnel that finds new posts and DMs commenters **within 1 hour**, and booking sync that sends each lead their pre call video and Zoom link

SELECTED UNIVERSITY PROJECTS

Raspberry Pi Smart Alarm | Computer Systems project, team of 5

Sep 2026 to Present

- Co designing a camera verified wake up system that only stops once the user completes a physical task; served as Security Officer in the first Scrum sprint

Mochi | Full stack web application, team of 6

May 2026 to Jun 2026

- Built the authentication module (bcrypt hashing, session tokens, request filter) with JUnit integration tests **above 80% coverage**
- Designed the 14 table PostgreSQL schema and delivered the friends, leaderboard and three tier profile privacy features (Java REST backend, Vue.js frontend)
- Reconciled the team's testing report against a suite of **600 automated tests**, including Selenium end to end tests

Scuba Chat | Network Systems project in Java, team of 5

Apr 2026

- Built a multi hop chat network for divers over a shared, collision prone emulated channel, implementing the full protocol stack: dynamic addressing, CSMA/CA medium access, routing and reliable transfer
- Reliable transfer layer fragments messages, retransmits on missing ACKs and reassembles them in order; control frames get priority and random backoff reduces hidden node collisions

SKILLS AND LANGUAGES

Programming: Java, Python, SQL (PostgreSQL, MySQL), JavaScript (Node.js, Vue.js), C++, Assembly, HTML/CSS

Data and tools: A/B testing, funnel analytics, REST APIs, Git, Linux, JUnit, Selenium, Raspberry Pi, Arduino

Methods: Scrum, requirements engineering, UML, database design

Teamwork: Five university team projects run in Scrum sprints (teams of up to 6, rotating roles such as Security Officer); cofounded a three person startup (Hive Setting)

Languages: Romanian (native), English (full professional), Russian (professional working), German (elementary)
